

# Data Analytics Project 1 Report

## Data Cleaning & Preparation

**Name:** Md. Sajjadur Rahman

**Project:** Project 1 – Data Cleaning & Preparation

**Organization:** Decode Labs

### Objective

The objective of this project was to clean and prepare a raw dataset by handling missing values, removing duplicate records, and correcting data formats to make the dataset ready for analysis.

### Tasks Performed

1. Checked the dataset for missing values.
2. Filled missing values in the **Coupon Code** column with "No Coupon".
3. Checked and removed duplicate records.
4. Standardized the **Date** column into **YYYY-MM-DD** format.
5. Verified numeric columns (**Quantity**, **Unit Price**, and **Total Price**) to ensure they were in the correct number format.
6. Performed a final review to ensure the dataset was clean and consistent.

### Result

- Missing values were handled successfully.
- Duplicate records were checked and removed.
- Date format was standardized.
- Numeric columns were verified.
- The dataset is now clean and ready for data analysis.

### Conclusion

This project improved my understanding of data cleaning techniques, including handling missing values, removing duplicates, and formatting data correctly. These steps are essential before performing any data analysis or visualization.
